

earlyCASE is offered in two version – the Basic [FREE] version and a Professional version at a small flat charge of \$198 regardless of the amount of data you analyze. For many people the Basic [FREE] version is enough of a quick look at what they have to begin making decisions, or perhaps just to memorialize what they received from someone (friend or foe).

The Basic [FREE] version while it does not have some of the advanced features found in the professional version it is packed full of features and valuable information and reports. In many ways the label “Basic” doesn’t even come close to doing justice to the powerful knowledge you get from it. For instance, PST analysis, including emails, and attachments to emails are all part of the “Basic” version. Now imagine the feature set on steroids and you have the Professional version of earlyCASE. Duplicate Document Detection and Container processing are the PRIMARY reasons most people elect the Professional version of earlyCASE.

**The Chart below highlights some of the key differences:**

Feature	Basic [FREE]	Professional
Easy to use Internet Based		
Data is Secure – Documents never Leave your computer		
Incredibly FAST- <i>The application runs LOCAL on your PC</i>		
MetaData Extraction for MS office documents & Email		
Microsoft Exchange PSTs and Email Analyzed		
Attachments to Email messages Analyzed		
15 High Quality Reports		
Project Budget & Timeline Reports		
Local Database created and contains complete doc inventory		
Pivot Tables, Charts & Graphs in the reports		
Ability to Change Assumptions and reprint the reports		
Generation of Hash Values for all documents and messages		
Exact Duplicate Document Detection & Reporting		
Analyze Zip Files Contents, Extract MetaData & Hash		
8 additional reports, including extensive 26(f) report		
	<b>[FREE]</b>	<b>\$198 per run Unlimited DATA</b>

**GOOD PRACTICE:** If you know that there are containers (zip, arc, rar, lzh, etc) you should consider upgrading to the Professional version to have visibility to the contents of the zip files and extraction of the Metadata from those documents. The Basic version treats the container as 1 document and does not detail out what is in these types of containers. If you need visibility to the # of duplicates you should use the Pro Version.

## earlyCASE “Basic” Version Reports:

1. Matter Report
2. Document Types Summary
3. Document Date Summary
4. Folders and Media Summary
